To Whom it May Concern,

29 July 2020

I first became acquainted with Dr. Aziz U. Rehman, Engineering Specialist, Inspection Department, Saudi Aramco, Saudi Arabia through his work co-authoring *A Practical Field Handbook In Industrial Radiography and Radiograph Interpretation*. Dr. Rehman is a member of ASNT and currently certified Level III in magnetic particle testing, liquid penetrant testing, and ultrasonic testing (awaiting results in electromagnetic testing, radiographic testing, and visual testing at the time this letter was written).

Dr. Rehman is active in his engagement with ASNT. In addition to volunteering as a subject matter expert in the review of highly technical publications, Dr. Rehman is currently writing an informational “Back to Basics” feature paper for *The NDT Technician*, on the topic of RT as relates to his book.

He is also involved in education. In June 2020 Dr. Rehman led two, four-hour training sessions on “Radiographic Film Interpretation – Bridging the Competency Gap,” which were attended by around 60 ASNT members each.

His efforts in the areas of training, peer review, and writing, help to ensure the accuracy of ASNT publications and educate future generations of NDT professionals.

Best regards,

Toni Kervina
